SelectPdf Sample Document

A short report converted by the SelectPdf Word to Pdf sample

This Word document ships with the SelectPdf samples. It carries headings, a table, a list, a chart and two links - an external one to selectpdf.com and an internal one that lets you jump to the conclusion - so the converted pdf shows how each of them comes across.

Quarterly figures

The table below lists the figures of the first three quarters. The converter keeps its borders, shading and cell padding.

Region	Documents converted	Growth
Europe	1,240,500	+12%
North America	980,300	+9%
Asia Pacific	615,800	+21%

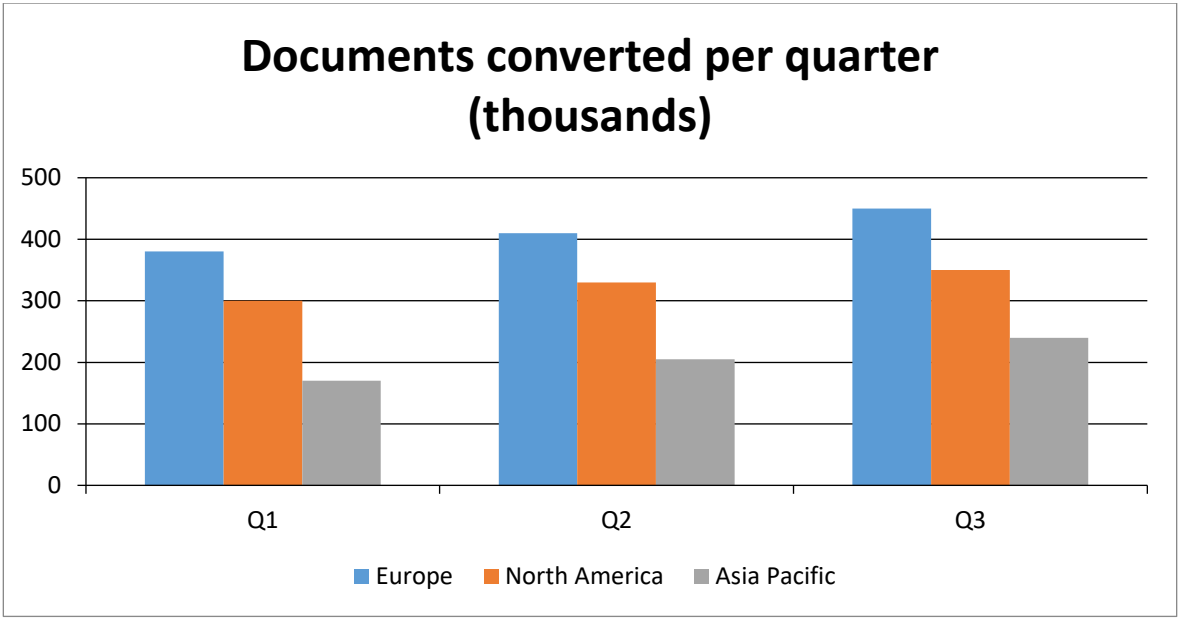

What the conversion keeps

Everything the Word document lays out reaches the pdf as vector text and graphics:

- headings, which also become the bookmarks of the pdf,
- links to web pages and to places in the document,
- tables with their borders, shading and padding,
- charts, pictures and the fonts the document uses.

Second Section

The chart below is a Word chart. The converter draws it as the document shows it, with its title, axes and legend.

Paragraph 1 of the second section. Body text uses 11 point Arial with a little room between the lines and between the paragraphs, the way a report is usually set.

Paragraph 2 of the second section. Body text uses 11 point Arial with a little room between the lines and between the paragraphs, the way a report is usually set.

Paragraph 3 of the second section. Body text uses 11 point Arial with a little room between the lines and between the paragraphs, the way a report is usually set.

Paragraph 4 of the second section. Body text uses 11 point Arial with a little room between the lines and between the paragraphs, the way a report is usually set.

Conclusion

This is the page the internal link on the first page leads to. In the converted pdf the link keeps working: it takes you to this heading.

Convert your own document with the form of the sample page to see how it comes across.
